

Upgrade a Schoorbs installation

Table of contents

1 How to upgrade.....	2
-----------------------	---

1. How to upgrade

Please backup all your Schoorbs data(files and database) before an upgrade!

1. We have a Schoorbs installation in .../schoorbs
2. Copy the directory of your current Schoorbs-installation to another location, e.g. schoorbs-old
3. Download the new version of Schoorbs
4. Extract it to the place where your current Schoorbs installation was before you moved it.
5. Copy over the following files from the current installation to the new installation:
 - config.inc.php
 - schoorbs-includes/logging.configuration.php
6. Now you are already finished, if you want you could delete the files from the previous Schoorbs installation which we moved to schoorbs-old.
