## 1. Overview

At the moment the stable releases have the version number 1.0.x, the unstable versions are only kept at the moment for historical reasons, you shouldn't use them.

### 3. Continous Builds

At [buildbot.xhochy.com](http://buildbot.xhochy.com) (<http://cruisecontrol-rb.xhochy.com/projects/Schoorbs>) we have a continous builder which goes through each new Subversion revision. This should help developers to verify that Schoorbs runs on other platforms too. Locally we have a virtual machine with several chroot-environments to check Schoorbs in several Database<->PHP combinations. If you want to have this machine, just contact us through our [mailinglist](#) (<http://groups.google.com/group/schoorbs-general-discussion>) .
